

# Status of GEO600

Benno Willke  
for the GEO600 team

LSC meeting  
Hanford WA, August 2004  
LIGO-G040366-00-Z

GEO 600

600m

600m

# Central Building

# Tube / Trench

# Clean Room / Control Room

# Optical Layout

# Optical Layout

# Triple Pendulum Suspension

# Thermal Noise Issues

→ Monolithic Suspension

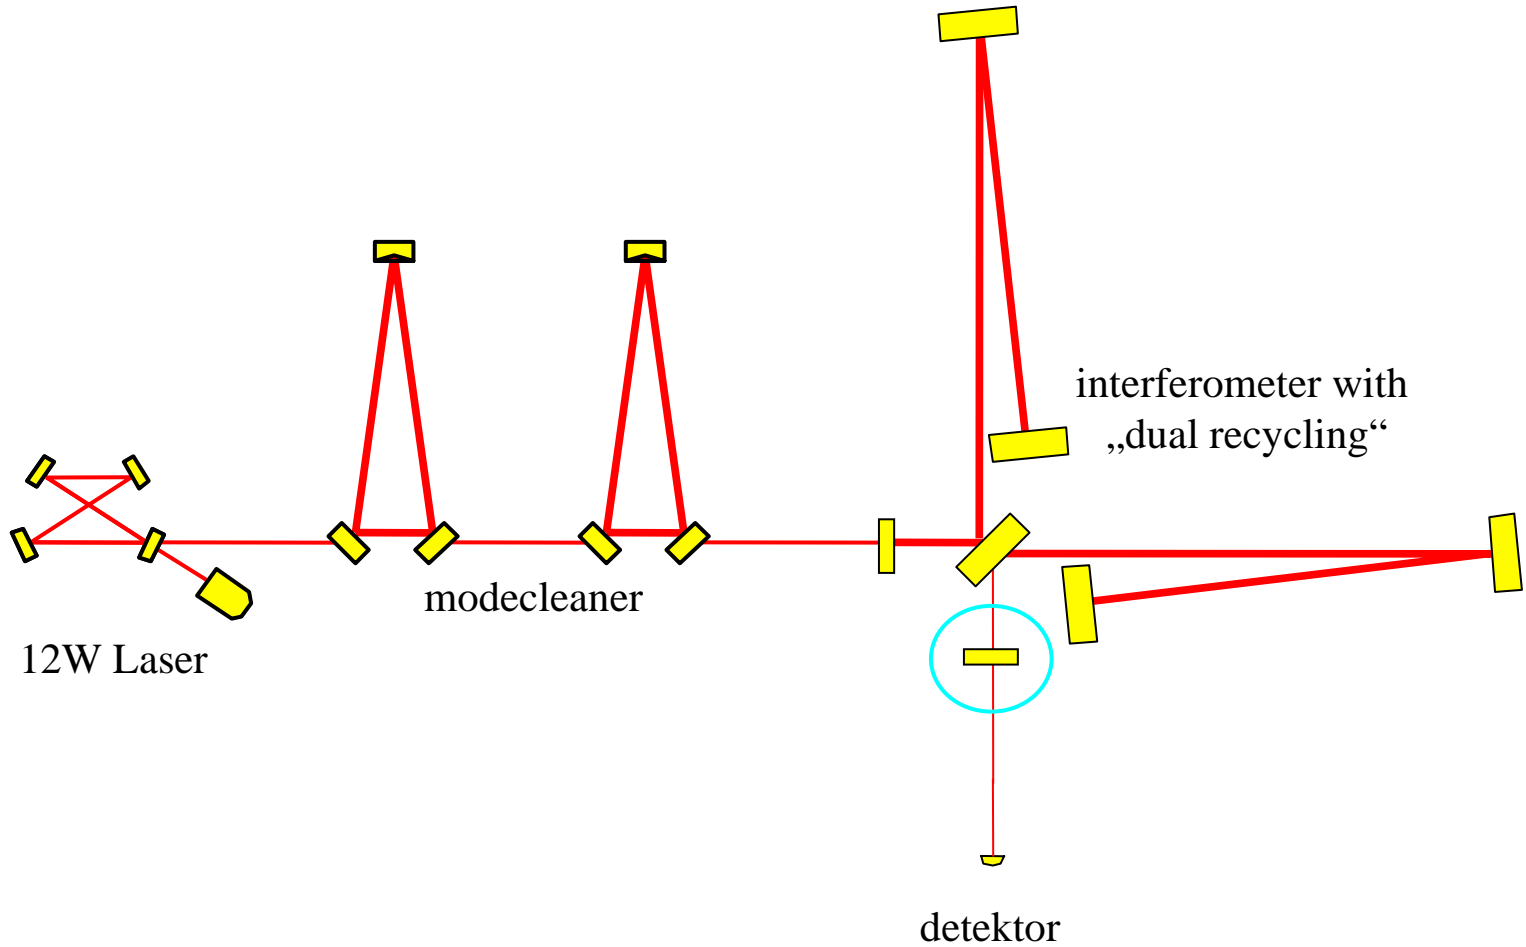

# Main Suspension with Reaction Pendulum

# Mirror Installation Fall 2002

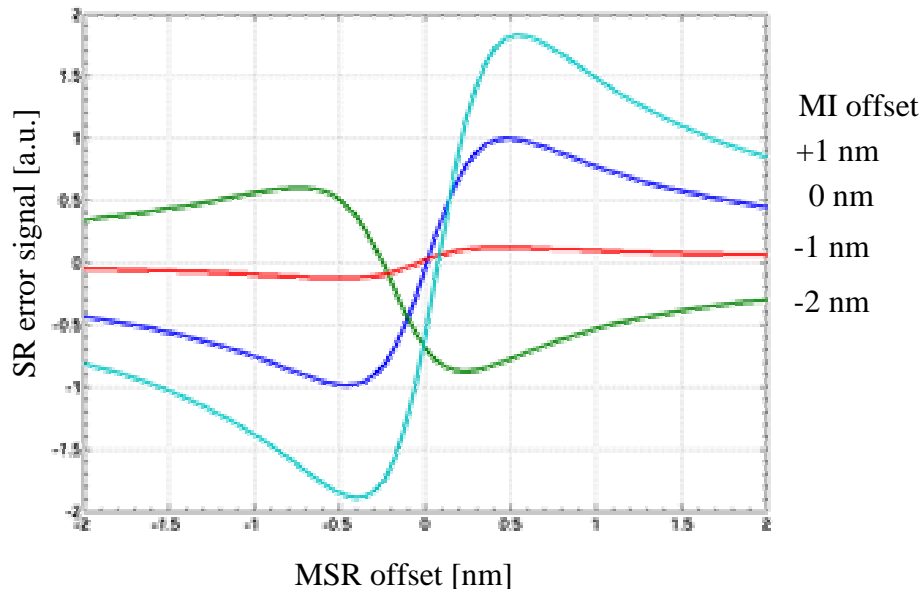

# Commissioning in 2003

- Radius of Curvature mismatch of end mirrors required thermal compensation scheme

- new lock acquisition sequence had to be develop

- delay in commissioning by one year

# Dark port contrast

~ 1 %

Power recycl. MI.  
without therm.  
compensation

~ 0.05%

Power recycl. MI  
with therm.  
compensation

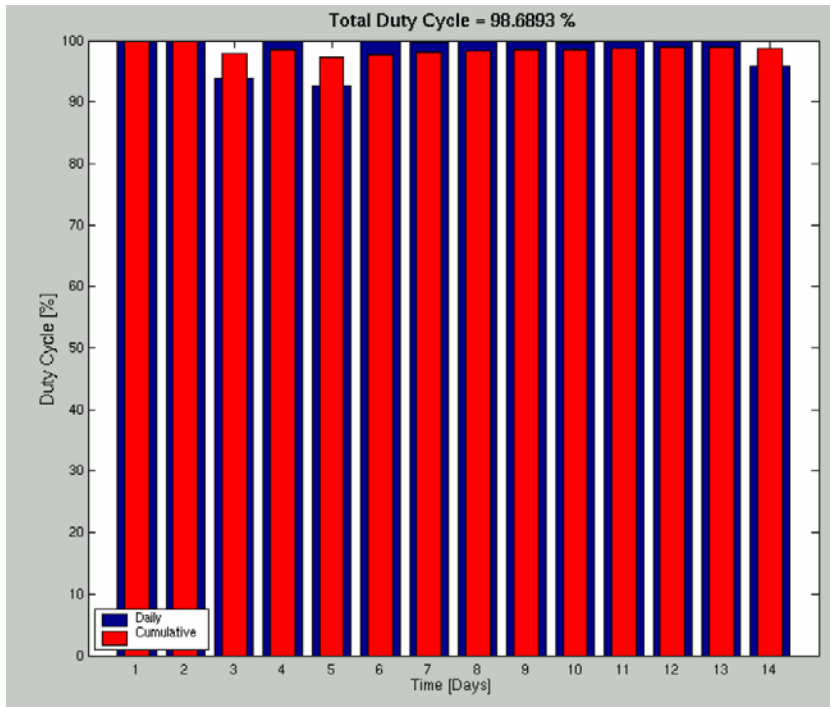

< 0.001 %  
(SB-dominated)

Dual recycl. MI  
with therm.  
compensation

(Ratio of carrier light power at dark port / power incident on beamsplitter)

# GEO600 - Participation in S3

**S3 part I (7 days)**  
*Nov 5th – Nov 12th*

duty cycle > 95%  
longest lock > 27h

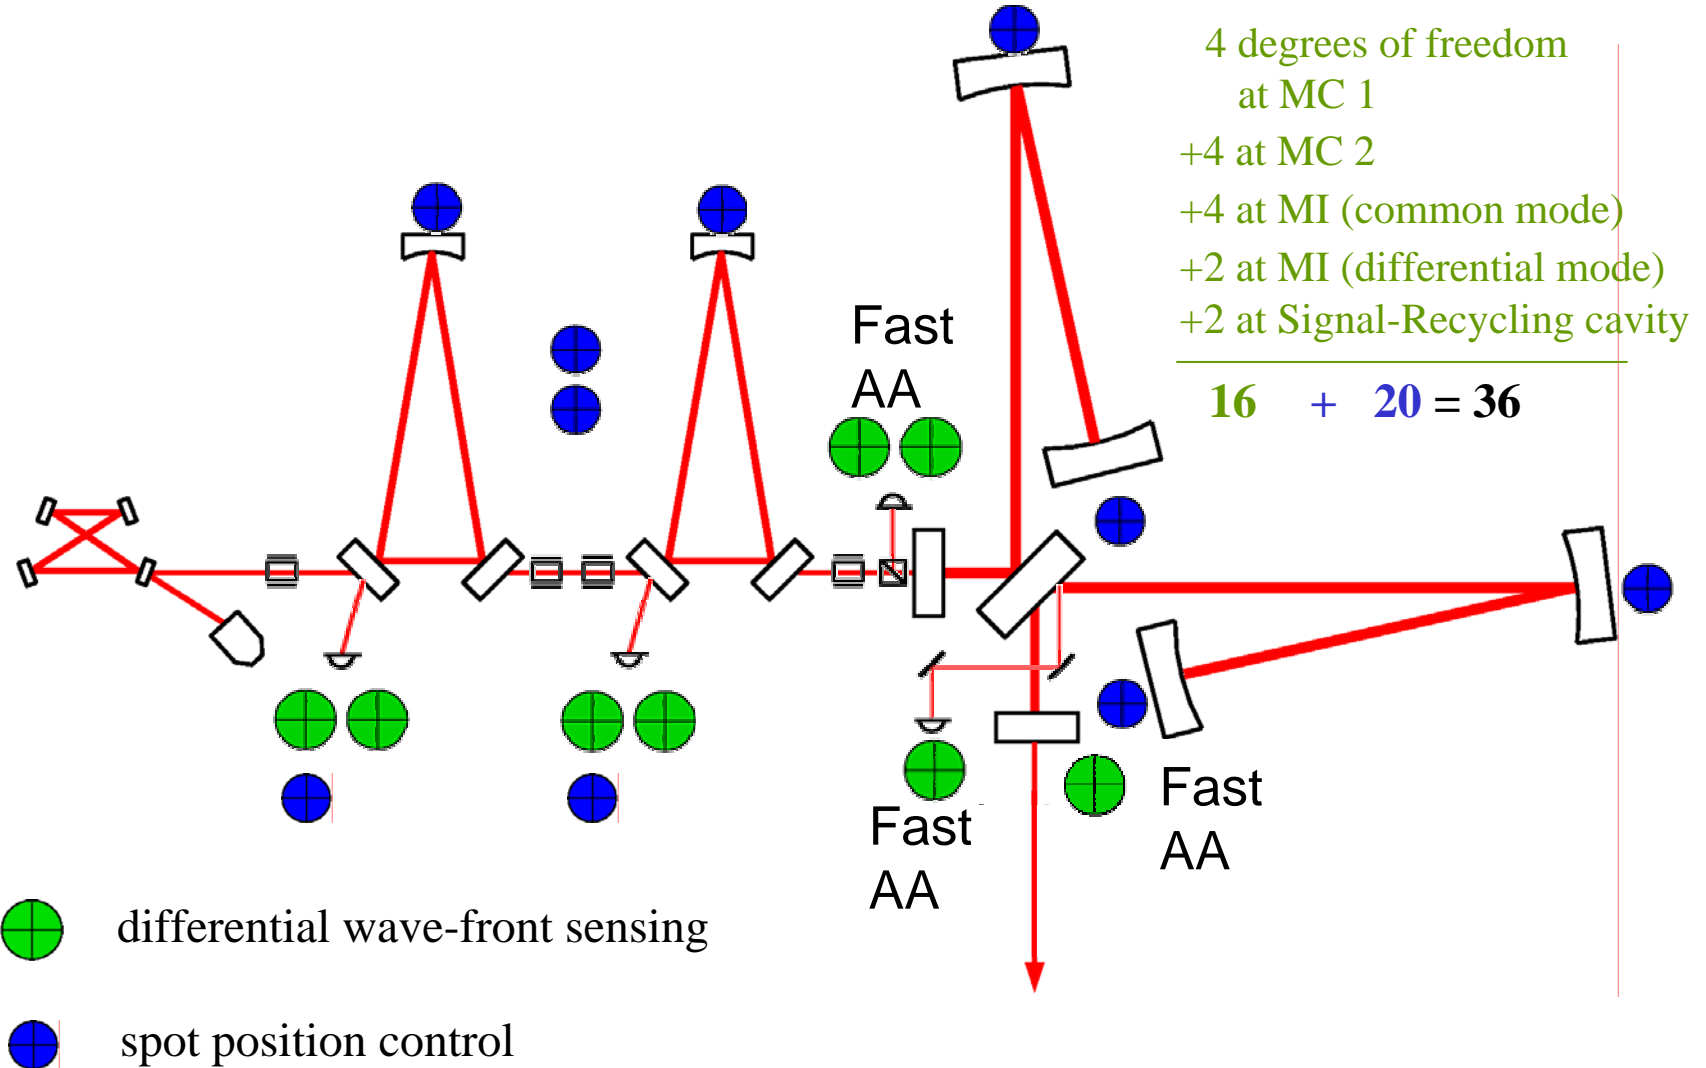

**S3 part II (14 days)**  
*Dez 30th - Jan 13th*

duty cycle > 98%  
longest lock > 95h

followed by 2 days for burst and  
inspiral injections

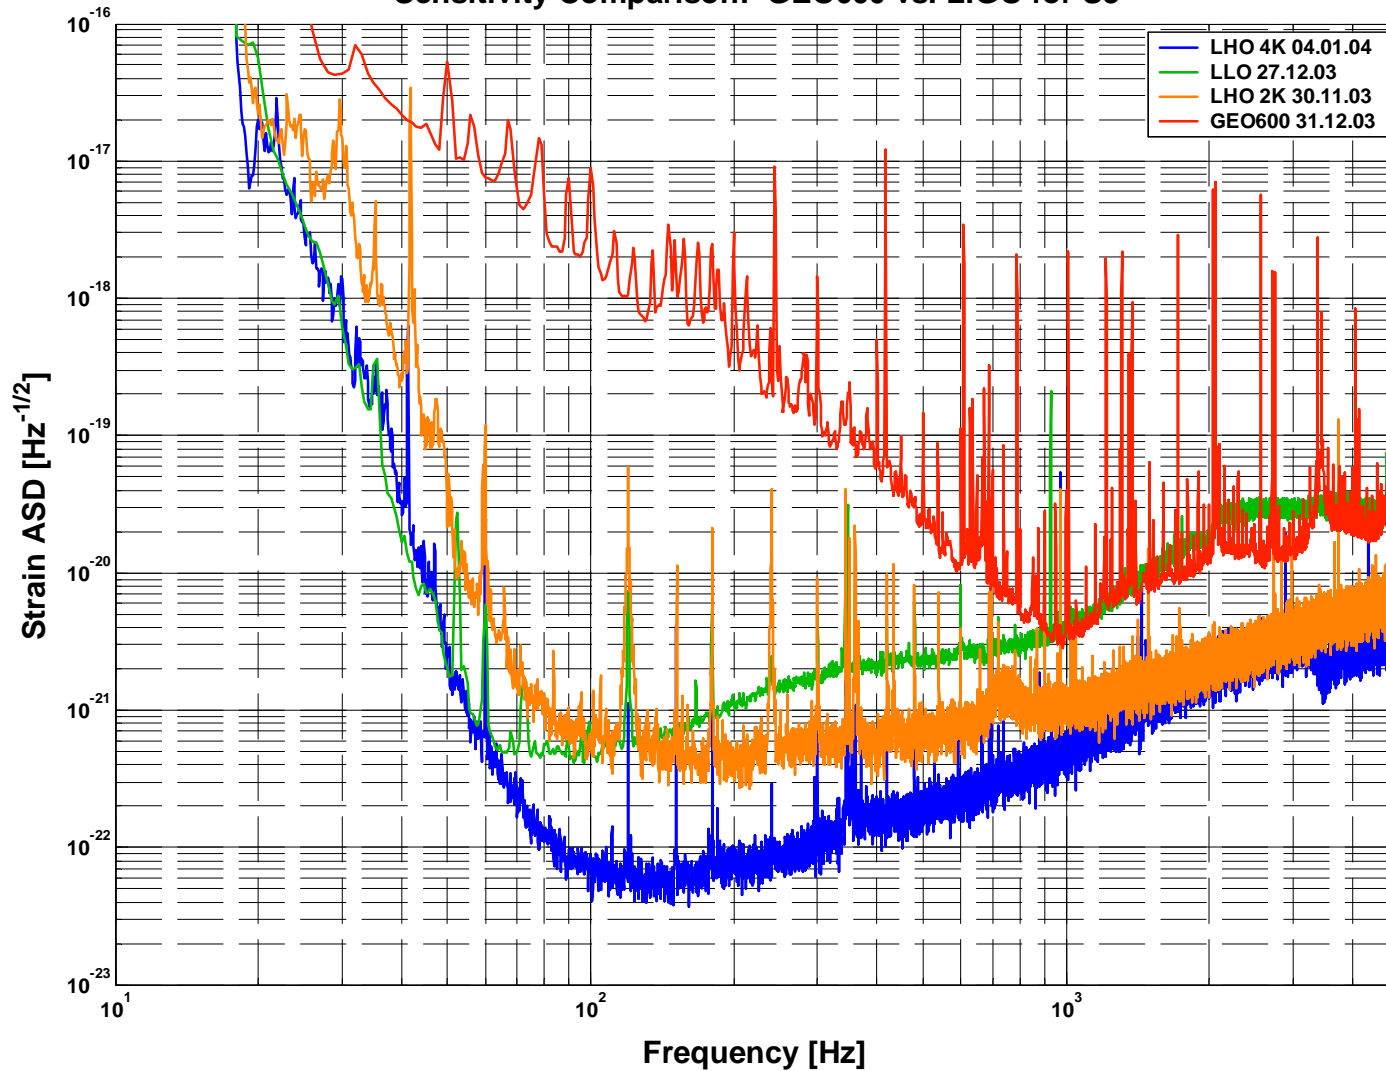

# Alignment Control

# LIGO - GEO Sensitivity During S3

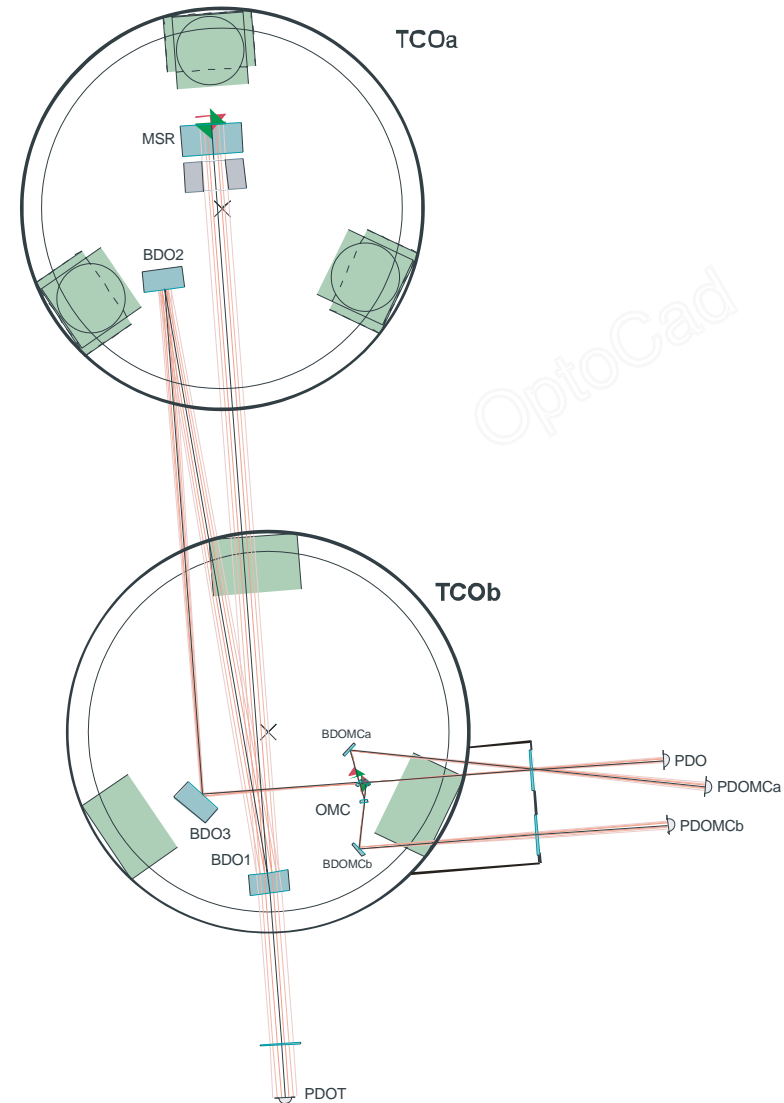

Sensitivity Comparison: GEO600 vs. LIGO for S3

# Commissioning in 2004

- new sensor (HPD) for MI length control
- change of rf-oscillators
- installation of suspended output optics / HPD in vacuum
- new gain distribution in MI length control

# GEO sensitivity development

# GEO600 vs. LIGO

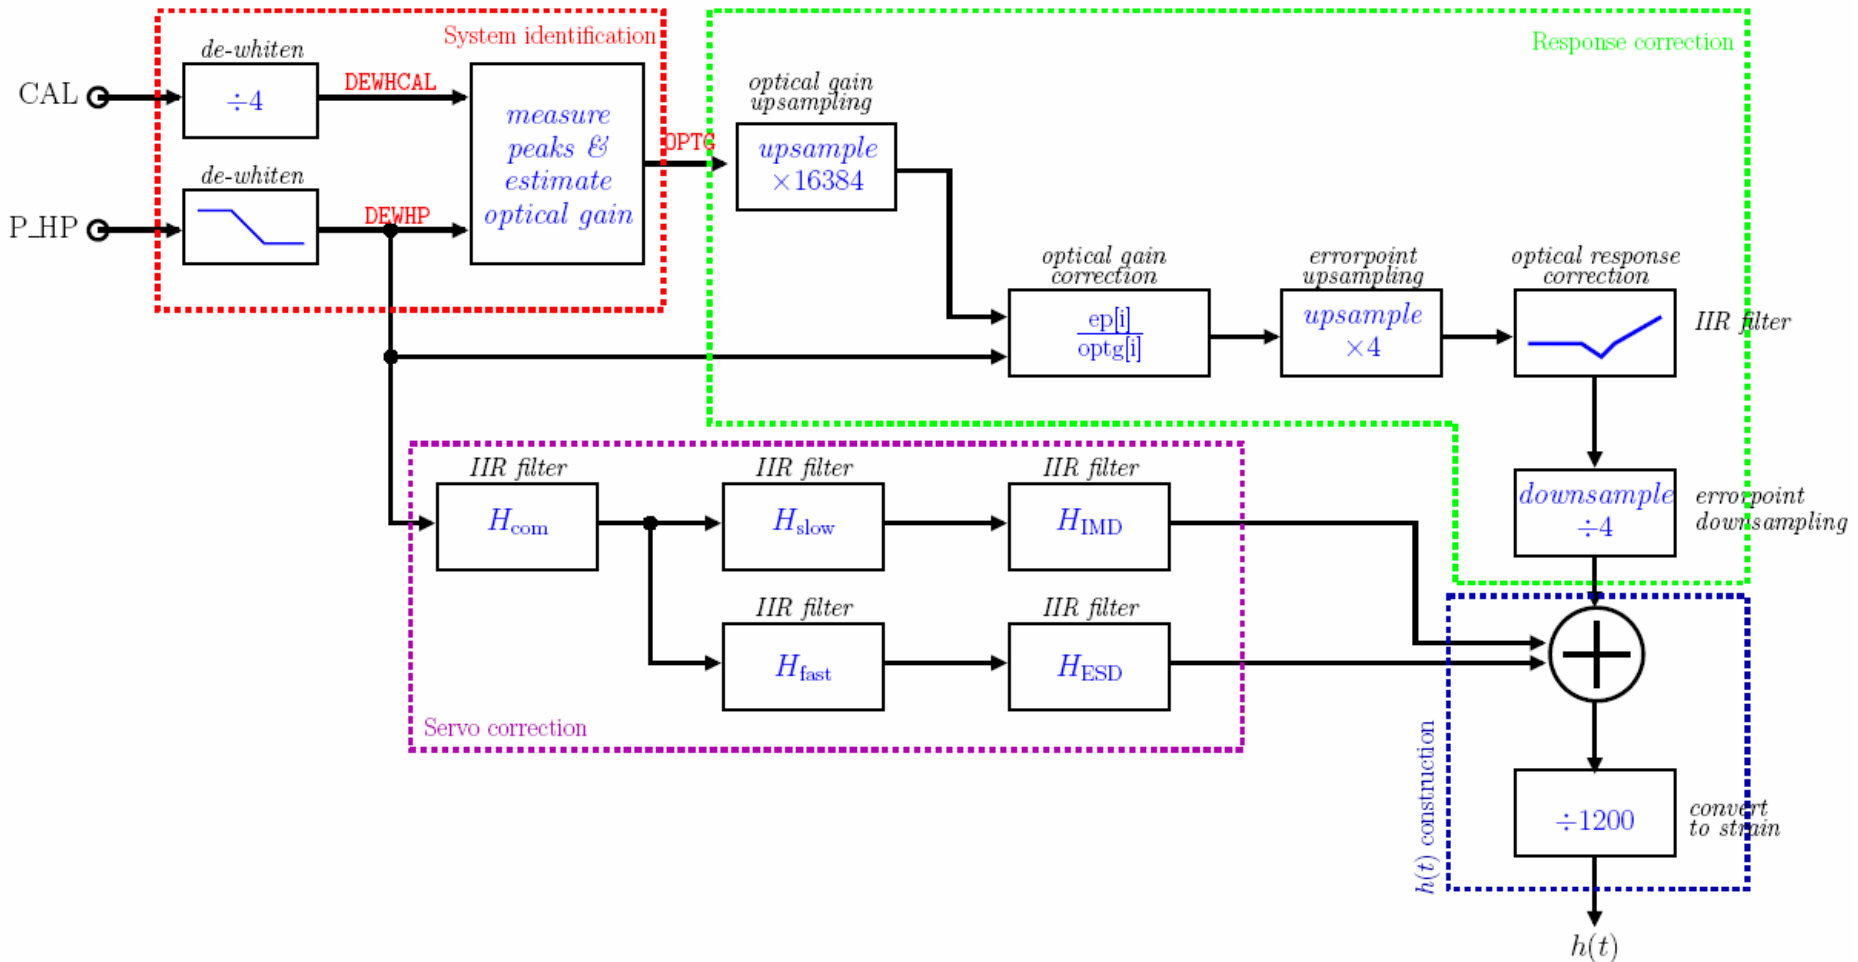

# GEO Calibration

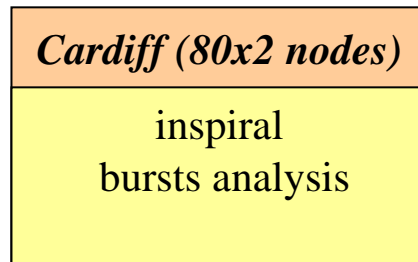

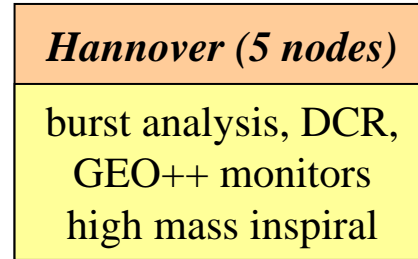

# DR Michelson Online Calibration

# Data Analysis Network

Continuous Waves (M.A. Papa)  
Stochastic Background (J. Romano)  
Burst Events (S. Heng)  
Inspirational Signals (S. Babak)

# GEO600 future

---

- improve sensitivity towards S4
- data taking at night and on weekends
  - after detector work turn maintenance switch to “off” and make sure that calibration works
  - we provide  $h(t)$  and calibration-quality information
  - data might be useful for all searches that do not need instrumental vetoes (cw, triggered bursts, ...)
- increase injected power
- increase power recycling factor
  - lock acquisition might cause problems
  - simulations and testing needed, maybe OMC required
