Outline

- Review NoiseFloorMon
- Describe recent revisions
- Discuss monitor output and channels monitored
- Offline results
- Examine threshold crossings
- To do list

Introduction

- NoiseFloorMon is a median-based noise floor tracker in operation at L0 and H0
- The monitor tracks slow non-stationarities as opposed to glitches or sharp transients.
- The monitor was developed in 2005 and tested on-site and has been in operation throughout S5

Changes made ...

Earlier :

- Tracking AS_Q.
- Frequency bands: 0-20, 20-100, 100-200 and 200-2048 Hz.
- Percentage threshold crossings are recorded and minute trends stored.
- Offline analysis:
 - looking at trends on a daily basis
 - comparison with BurstMon output
 - activities in different frequency bands
 - correlation with SenseMon output

Now :

- Tracking AS_Q and all seismic channels.
- Frequency bands : 0-16, 16-32, 32-64, 64-128 Hz.
- Minute trends of max threshold crossing and cross correlations with the seismic channels stored.
- Offline analysis :
 - looking at trends on a daily basis
 - studying cross correlations with the seismic channels
 - Looks up other monitors for comparison.

Location of results/ reports ...

People ...

Daily update is made (mostly automated/minimal supervision) and can be accessed at :

www.phys.utb.edu/~soma/MNFTresults/NoiseFloorMon_daily.html

Some analysis results/shift summaries can also be found at :

www.lsc-group.phys.uwm.edu/glitch/investigations/s5index.html

People who have been involved at various stages of this work

S. Mukherjee (algorithm and main code); Roberto Grosso (DMT code); R. Stone (present offline analysis). *Past result web page maintenance : T. Inoue & M. Oyervides (undergraduate students).*

Future ...

- Continue analyzing S5 and future data.
- Look for correlation with other monitor results.
- Make a time-frequency study to see what actually happened during the threshold crossing epochs leading to understanding the relation between the AS_Q and the auxiliary channel in question.
- Extend the study to micro-seismic band.
- Chart weekly and monthly trends
- A new monitor ... MicroseisMon ?
