aLIGO Interferometer Optics Positions and Orientations for Initial Alignment

■ Revision History

■ Version -v1

■ Version -v2

2/12/2013, D. Coyne

- 1) Fixed error in calculation to insure that the PR2, PR3, SR2, SR3 optics are oriented vertically with respect to the local gravity vector (i.e. in local coordinates). Previous calculation had a small pitch error (due to yaw rotation in the global coordinate frame instead of local frame).
- 2) completed calculations of the locations and orientations of all of the H1 PRC and SRC optics (was partial for -v1)
- 3) Made nicely formatted tables for the summary tables

■ Notes and Notation

Both Zemax and Optica (a TM package for optical design in Mathematica) can be used to ray trace through an existing placement of optics, but it is cumbersome to use for determining the aligned positions of a number of wedged optics (as is

the case with the recycling cavity). This notebook determines the positions and orientations of the optics given the following information/assumptions:

1) the X- and Y-arms are assumed to exactly 90 degrees apart. (T960176-C indicates that the deviation from 90 degrees is 1.2 microradian).

2) the x and y axes are aligned parallel to the Fabry-Perot arm cavity axes, with the origin defined at the intersection of the recycling cavity beams and the splitting surface of the BS

(Note that this is later converted to the LIGO global coordinate system; The LIGO coordinate system has its origin at the projected intersection of the BT cavity axes.)

3) the notation is as follows:

u_i = ray unit vector for the beam incident upon surface i

v_i = ray unit vector for the beam reflected from surface i

w_i = ray unit vector for the beam refracted through surface i

n_i = unit normal vector for surface i

■ Zemax results

Zemax results are from D0901920-v13

The wedge angle magnitudes (but not orientations/signs) reported in the Zemax optical layout, D0901920-v13 differ, as follows:

ITMx = ITM10? = 0.077 deg (same value but serial number designation is wrong)

ITMy = ITM11? = 0.076 deg (value and serial number incorrect)

CPx = CP01 = 0.070 deg (serial number correct, used “final” wedge angle instead of C1107164-v1 value)

CPy = CP02 = 0.069 deg (serial number is incorrect)

BS = BS06 = 0.076 deg (same)
